

Superior Visual Valve Position Indicators

The INDICATEUR and INDICATEUR DIRECT are superior visual valve position indicators for virtually any rotary operated valve. Each has a rugged design suited to withstand harsh plant environments and operations. *Two versions are available:*

- 1 - The INDICATEUR DIRECT mounts directly to NAMUR actuators without a bracket (80 x 30mm patterns only).
- 2 - The INDICATEUR uses standard VPT shaft lengths and mounting patterns allowing use with virtually all types of pneumatic and manual actuators.

Features Include:

- ▶ Clear Ektar cover offers optimum chemical resistance and strength and is environmentally sealed to prevent fogging or entry of contaminants.
- ▶ Careful material selection provides Moniteur's patented indicator a rated life of minimum 1,000,000 cycles.
- ▶ Materials of construction selected to excel in high vibration, corrosive and dirty environments, either indoors or outdoors.
- ▶ Indicator is fully adjustable to any valve or actuator.
- ▶ The industry's only "true" visual valve position indicators available for a wide variety of multi-port valves, adjustable to match the actual physical flow pattern of the valve.
- ▶ Molded from DuPont's SuperTough Zytel Nylon for the ultimate in strength and corrosion resistance.
